

Lee having trouble with test flight and installation

Icons need to be bright and white

Disable the scroll bar, insert arrows (cevron up and down on the filter

Ajax or ajax loading gif to increase responsiveness (icon mask)

Caching on iPhone (pulling info after swiping up on application)

Documentation on how to utilize app for other tours

Submit modified source code for the leaflet icon colors

Consider several change overs for stable server releases (dev, staging, production)

Black background with white text on group section with transparency for labels
