

Meeting Minutes for 11/4/2014

Start Time: 5:00pm

End Time: 6:15pm

Agenda:

- Review Risks
  - Greyed out risks are being retired, but kept around until shown to the sponsor.
  - Added 4 risks regarding mocks.
  - Mocked vs Actual Datto Systems - big risk.
    - Mitigation - working closely with Datto to make the mocks as close as possible to their system.
- Sprint Progress
  - Reviewed In-progress, completed tasks, added tasks, and story pointed them.
  - Preparing for the next few weeks based on the project plan.
  - Initial Unit Testing has been started.
- Linode Server
  - Team decided on the \$20 per month plan, which should be enough.
    - Will upgrade should it come to.
  - **Send an email with our request for the Linode servers to Chris.**
- Review Architecture Document
  - Updated with a new diagram of the architecture of mocked systems.
  - Decided to mock things in order to have a functional product at the end.
  - Mocked OAuth Server, Device API, MSP Credentials, and Datto Devices.
  - The databases exist on Datto's end, **so the team would like their schemas to be able to create a mock of them as close as to the originals.**
  - No existing way of getting devices on Datto's end.
  - Its implementation is being designed to be possibly implemented by Datto at a later time.
  - Batch job to run daily, updating tables, getting devices etc.
  - **New expectations from Datto: OAuth Server, and new Devices API.**
    - Will be mocked for now, but would be helpful to have them at some point during the project.
    - **Who will be responsible for implementing the new Devices API?**  
(It's not Chris)
  - Big concern over the design of the mocked things, as during integration things may not match up properly.
  - Datto's device table has more things that we need.
    - Chris will try to do something to give us only what we need.

Questions

Misc.

- Chris knows Laravel now. He can help us if we need it.
- Start preparing for the interim presentation.
- Coordinate/decide on attire for the presentation.

After the meeting:

- Plan for Thursday: Not much to meet about, working day.

-----

Action Items Email

-----

Here are some action items from today's meeting.

1. DB Schemas: We are hoping to get information of the **devices** table and **MSP** credentials table. This will allow us to create mock versions of these tables. **If you could give us a mock row** or representation that would help us, that'd be greatly appreciated.

Specifically, we believe we will need to know details about 2 fields in the devices table:

- device\_id (is it a String or int?)
- msp\_id (is it a String or int?)

In the end, we hope the exposed API endpoint will return this information:

```
// DB
device_id: String / Integer,
msp_id: String / Integer,
// Maxmind
latitude: Float,
longitude: Float,
city: String,
state: String
```

2. Devices API: A new Devices API will be required from Datto. It is a simple GET that should return all devices in Datto's database. Could you look into **who will be implementing this**? We will define all the specs and requirements of this API in a separate document, and send that to you when it is ready.
3. Linode Server: We would like to get a 2nd tier server provisioned. This is the one that has 2 cores and 2GBs of ram, and is \$20/month: <https://www.linode.com/pricing>

Thank you for your help!  
Brandon
