

## Meeting Minutes

- Discuss items on the agenda.
  - UI Mock-ups.
    - Possible 2 views you can switch between. The usual view with devices and risk and just a view with only the weather on it.
    - Different ways to use the mobile app.
  - MSP Log-In
  - Mobile Mock-ups
    - Utilize Colors on each device/row to reflect risk.
- Questions
  - What will the app be running on, concerning performance.
    - “Shouldn’t be an issue”
    - Chris will get back to us on the hardware.
  - How often do you want the weather to be updated? Free ones are usually 10 minutes.
    - 10 minute refresh intervals is good enough.
- Initial Architecture Design
  - Data set is not very big. A single large call to the API might be enough.
  - How does log-in work either web or mobile app.
    - We’ll email Chris this question so he can think about it.
  - Suggestion on securing the APIs
    - Chris will get back to us.
  - Chris suggested Lucid Chart along with Visio.
- Think about other features that can be added to the apps.
- By next week a more formalized architecture doc will presented.
- Officially start Sprint 1.
- Risk **must** be given attention to, even if there is no change in risk, but expect it to.
- PM owns the risk document.
- Plan on looking at a midterm-document for next Thursday(October 9 - Week 8).
