

Tasks to do this week:

- Give Dr. Vallino a summary/plan for the next 2 weeks
- Get technology set up when Kurt has given us the website
- Design more wireframes
- Peer review?
- Include Project Synopsis in the agenda for Dr. Vallino
- Refine the Requirement Documents and the Permission Document

For Thursday/2 weeks:

1. refine use cases (dan)
2. more wireframes (dennis, maybe dan)
3. permission document (add parameters for each permission) (nick)
4. look at frameworks for web design (all)
5. create survey for user(one big survey)
6. email Vallino the updated documents(use cases, wireframe, permission definition, 2week)

Project synopsis: (add 100 more words)

We are to design a system for Software Engineering students who plan to use the SE team rooms. This system is for all students, staff, and faculty to reserve a team room instead of hoping for an available team room. The system will allow certain user classes to change the parameters that will govern the properties of a reservation, and how they are made and held. There will be views to allow admins to survey the availability of rooms as well as all current notifications. Our system will acknowledge greater privilege in some user groups allowing them preemption over others when creating reservations. This system is necessary as the usage of the team rooms have greatly increased over the last five years. Targeting mobile platforms with browsers, we hope users will be able to create reservations wherever they are with ease.
