**EVALUATION SYSTEM v2.1**

**Team Members:** Michael Peexott, Jeremy Pittuzke, Leo Rausch, Greg Warchol

**Senior Project - 2013**

---

**Motivation**

The system that is currently in place is slow and takes a long time to process submissions made by both students and employers.

The current system occasionally fails to submit evaluations after students and employers have spent a long time working on them.

The current system lacks several features that are critical to its functionality and often deter users from the system.

In its current state, the system is difficult to understand and requires new technology to improve its usability.

---

**Process**

The team used Scrum to maintain constant communication and provide visible deliverables at the end of each sprint to the product champion.

Daily stand-ups allowed the team to address issues before they arise during project development and speed release cycle.

---

**Workflow**

Before a student can complete a work report, they must first obtain a job and notify the Office of Co-op Education and Career Services (OCECS).

Three weeks prior to the end of the academic term, the office sends out an email notifying students of their work reports and employers of their evaluations.
