re lack of OSX dev environment - school can't give us a loaner for the entire project or fund us buying one, virtual OSX only possible on apple hardware or some custom built machines. Will need to find a new way to test Apple stuff.

CODE REVIEW
edu.rit.se.CDVInterface - stops GPS tracking in the onDestroy() method, but may need to also stop tracking in the onPause() method in case the user minimizes the app with the home button instead of closing the app down completely
