WebEx Meeting

Lee hasn't heard back from Dan yet, he needs to accept permissions-wise for the developer for test flight

Lee does not have iOS 8 at the moment, might upgrade soon if he can free up space on his phone

Stephan is working on UI changes that Lee suggested, trying to make it "look pretty"

Josh and Tom working on backend server changes, working out some issues at the moment with migrating the new schema
  Lee forgot what it's called, Postgris IDE, visually update the database

Big Data mode:
  useful to get the scope for this
  nearly all functionality would be shut off, just an alternate screen with start/stop button
  alternate splash screen. Maybe about and FAQ buttons.
  should write to the same database as the other features
  only difference between existing tracking and this new tracking would be scale
  can record data and later assign it to a map on a server that can handle larger regions
  "commuter router"
