WebEx Meeting

Lee has an idea for a new feature that would help to record different commuting routes that people use on their bikes

Mode with a screen called gather data that does nothing but gather data, user routes are recorded while they ride if they enable this mode on their app

uses same database we currently have

don't need to put on map, processor usage reduced

could be used in New York Big Data conference

Other details
Google Play credentials will be received from Christopher this week

Things missing from current filter list:
Parking
Vantage Points (Picture, icon is a camera, line 4668 in resources/data.kml)
Ferry
switch marker for info+toilet to match the one on the filter list

Next meeting will be **Monday 9/15/2014**

Josh has managing privileges on the CR branch in the Git repository and will be committing the most recent code to it
