Mac Mini is set up in the grad lab, team should have swipe access to get in there

Remote access options Mac:
      TeamViewer
      Google Chrome Remote Desktop
Team wants to get remote access set up so that iOS development can be done from home/team rooms as needed

Need admin passwords for Mac so that we can install software on it

Sara will handle iOS development alongside Josh

Tom will make sure the Android app is ready to release when Lee says it's okay

Stephan will continue working on UI for FMF feature

Josh is working on transactional development on Android side
