

## Actions to be Taken

### Team

- None

### Paul

- Install chrome and use application on chrome

## Meeting Notes

- Installer
  - <https://www.dropbox.com/s/7w3m6nwwehn094b/TTKD.exe?dl=0>
  - Uncheck MongoDB and NodeJS since they are already installed
  - New installer did not properly terminate old service
  - Cannot log into administrator on tablet with new installation
    - Database does not include proper user account information
    - Change url to just localhost:9000/admin/
- Tablet Choice
  - Used on Amazon
  - Refurbished ones on <http://www.woot.com/>
- Initializing Student's Rank
  - In current installer, can only check-in for workshops
  - Mandatory rank filter for check-in for classes
  - Default new students to lowest rank
    - Add flag to attendance model to indicate that the entry is from adding the student to that class
    - Create achievement that gets associated with that attendance object
  - **Team Decision:** After selecting a class, user is taken to the view with all the students listed (including unranked). Unranked students can filter by name and check in. Ranked students can select the "Rank" button to filter by rank and/or filter by name.
- Proper Error Messaging
  - Be sure to report unsupported functionality/errors in meaningful messages
- Checkin User
  - username: checkin
  - password: password
  - Cannot login to checkin user, database not initialized with checkin user
- Workshop attendance
  - Email distribution list
- Student attendance
  - Avatar is shown
  - Adding achievements
- Checkin
  - Register in checkin view
