

Action Items

Paul

-

Team

- Come up with a recommendation for implementation of student notifications
- Remind Paul of meeting on Tuesday 4:00

Meeting Notes

**Meeting Tuesday 4:00*

Discussion of updated attendance wireframes

- Filtering is important
- Wants to “manipulate data as best as possible in least amount of clicks possible”
- Wants to export list as well to an excel readable format

Discussion of “student notifications”

- Customizable message that displays for flagged student(s) immediately after check-in
 - Not necessary to limit message length
 - Something like an auto-dismissing pop-up notification
 - Non-critical information, so students shouldn’t have to manually dismiss the message
 - Students may receive multiple notifications (or add to existing notification)
- Administrator would type in a message specific to the student that would be displayed at next check-in
- **Team ideas:**
 - Put notification message in the “Confirm?” dialog
 - When user cancels confirmation/check-in, the message is not flagged as read
 - Notification flashes after check-in confirmation
 - Touch-and-hold to keep message on screen

Need to add a Back button when “view x attendance”
